#### **DETAILED ACTION**

## **Double Patenting**

Claims 1, 3-4, 8-13, 17, and 20 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1, 6-9, 13-16, and 19 of copending Application No. 10/580,115. This is a <u>provisional</u> double patenting rejection since the conflicting claims have not in fact been patented.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2, 15, and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Applicant's claims for a condenser fan which "blows air along an outside of the air duct" seems unclear with regards to the invention. It is noted that this is supported in Applicant's specification on page 6, lines 5-6, however, how does the condensing fan blow air long an outside of the air duct? As shown in Figure 3 of Applicant's drawings, it appears that the condenser fan 240 is connected to the meandering air duct and thus blows air inside/into the air duct, rather than blowing air outside the duct. How is the condenser of Applicant's invention also used to blow air along an outside of the duct, when it appears only to direct a flow of air within the air duct?

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Enokizono (Patent No. 5,337,500).

Enokizono teaches a dishwasher having a washing chamber 14 for holding utensils which are washed and dried therein. The drying functions are performed using at least the following parts: a circulation duct 56 (air duct); heat exchanger 68 (condensing apparatus), condensate container 32 (condensed water discharge port), outside air duct 82 (vapor exhaust port), a first fan 72 (condenser fan), a second fan 86 (dryer fan), and a motor 74 which drives both the first fan and second fan together (motor).

The prior art, Enokizono illustrates a right-hand side of the duct (outside air duct 82) which reads on Applicant's claims for an "air duct", the left-side of the duct (rear duct 80) reads on "an outside of the air duct", therefore the first fan 72 (condenser fan) blows air along an outside of the air duct 82. Moreover, the fans 72, 86 of Enokizono read on Applicant's claims for cross-flow fans since they suction air and discharge air in a radial direction.

Art Unit: 1792

Finally it is noted that although the second fan 86 (dryer fan) is formed in the path of the air outlet, it fully is capable of functioning as Applicant's dryer fan for "providing suctioning force to suction vapor from inside the tub", since the second fan 86 is fully connected to the dishwashing chamber 14 and since it is driven to help the flow of air in an outwardly direction, the air inside the chamber is thus forced/suctioned outwards by fan 86. It is well settled that the intended use of a claimed apparatus is not germane to the issue of the patentability of the claimed structure. If the prior art structure is capable of performing the claimed use then it meets the claim. *In re Casey*, 152 USPQ 235, 238 (CCPA 1967); *In re Otto*, 136 USPA 459 (CPA 1963). Although fan 86 is not formed at the immediate outlet of chamber 14, it is still fully capable of forming a vacuum/suction effect by delivering air out of the chamber from the exiting part of the circulation duct 56 since fan 86 drives air out of the dishwasher.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Jacobs (Patent No. 3,068,877) teaches a dishwasher ad drying system therein.

Quayle (Patent No. 4,247,158) teaches a dishwasher airflow drying system.

Suzuki et al. (Patent No. 5,076,306) teaches a dish washer with dryer.

Taylor, Jr. et al. (Patent No. 5,660,195) teaches a dishwasher vent system.
